R

Hi Ícaro, have a great time. First at all, please excuse me the time Im sending you those questions, but I was in other things (from IAvH too) and I did no have time to translate. Sorry, I mean.

Jaime did prepare 5 questions that I will try to translate:

{1) ¿Donde encuentro en el Sistema un ejemplo concreto de diseño de formulario para la inserción o el CRUD de datos, de manera que pueda ver su interacción con los servicios y capa de negocio de la solución?}
1) Inside the system, there is an example of form design for data-CRUD? In that example is possible to look the services interacting between the solution?

{2) Mediante qué recurso accedo a consultar las bases creadas en los tres motores (ELASTIC, COUCHCH Y SQLITE) y si la base no existe (Relatorio), cómo lo creo desde cero}
2) How can we consult (what or where is the resource to consult) the data created in Elastic, CouchDB and SQLite? In the case the data doesnt exists, how can we create that data?

{3) Como resuelvo el problema recurrente de Bad Gateway 502 que me sale una vez intento acceder a las URI de los aplicativos}
3) Most of the time we have a 502 status response (Bad Gateway) when Im trying to reach some URIS of the application. How can I resolve this problem? Where we can resolve that?

Inline image 2

{4) Nos podrían clarificar las URI de acceso a cada módulo del Sistema Flora. Se ha identificado hasta el momento las siguientes:}
4) We have access from some access_URI's (and we want to know where can access the "?" URI's that we havent identified yet?

Athentication	http://192.168.50.200/connect/register
Taxonomy service	http://192.168.50.200/floradata/
Checklists	http://192.168.50.200/checklist
Occurrences	http://192.168.50.200/occurrences/?back_to=/occurrences/ebenaceae_endemicas/families#
Consolidation and Analysis	?
Risk Assessment	?
Publish	?
External tools	http://192.168.50.200/reports2/index.html

{5) ¿En qué archivo de la solución nuvem corrijo la excepción JavaScript para autenticar al usuario, puesto que no está funcionando?}
5) We have encountered an exception when trying to autenticate the user. Inside the nuvem, where is located the solution for this issue?

Inline image 1

Seems to us that the URI isnt well formated...

Inline image 3

{6) Es posible contar con un documento que especifique como cargar los datos desde los taxones y familias, hasta la especie. Una vez cargados, como se visualizan en la consola de KIBANA y COUCHDB?}
6) How can we upload the data from taxons & families until the species? How can we see the data in Kibana and CouchDB?

Thank you so much in advance, and have a great weekend.

Buen día

Les ofrezco disculpas, pero se me presentó una dificultad por un tema de salud y no puedo asistir a la conferencia el día de hoy.

Solicito amablemente su colaboración para que la reprogramemos esta semana

Muchas gracias

Jaime Gutiérrez

No problem Jaime.

What about wednesday at 15:00 afternoon my time?

Or any other day this time will be good for me.

Hello Jaime.

Getting back to the questions.

#1 - I think I explained during our conversation today. If not, just ask me again what I missed.

#2 - After running(make run) local, you can access couchDB typing on your browser **localhost:5984/_utils**, and elasticsearch **localhost:9200**.
I recommend to follow both tutorials later. In the case the data does not exist, you can go to localhost:8080 and create a new *recorte* inside Aplicações.

#3 - Probably this application is not running properly. After reading first points of docker, installed and typed *docker ps*, you can see all the apps that are running.

#4 - Risk Assessment would probably look like: 192.168.50.200/assessments/ with the popup to login.
The others you should take a look inside each repository(config/docker-compose.yml) on CNCFlora GitHub's repository.

#5 - I would say the same answer to question #3.

#6 - Once you have created the *recorte*, question #2, you will probably have access to
http://localhost/checklist/*nombre_de_tu_recorte*

Hope this email can help you.
